

THE CORPORATION OF THE TOWN OF TECUMSEH

Road Needs Study 2024

Final Report

September 18, 2025

The Corporation of the Town of Tecumseh
917 Lesperance Road
Tecumseh, ON
N8N 1W9

Attention: John Henderson, P.Eng.
Manager, Engineering Services

Road Needs Study 2024 – Final Report

Please find enclosed the Final Town of Tecumseh Road Needs Study 2024.

The attached final report includes your comments and feedback provided during the course of this project. We appreciated the opportunity to collaborate with the Town throughout this project and look forward to any opportunities to assist the Town during subsequent implementation stages.

Sincerely,

DILLON CONSULTING LIMITED

Executive Summary

This Road Need Study (RNS) was completed for the Town of Tecumseh as an update to the Town's previous study completed in 2019 by Dillon Consulting Limited (Dillon), which aligns with the 5-year interval outlined within the Town of Tecumseh Asset Management Plan Version 4.0 (2024). Existing road conditions were documented using vehicle-mounted sensing equipment, which was carried out by StreetScan in May 2024. The use of automated pavement condition measurement was intended to provide a more objective and repeatable determination of the overall pavement condition index (PCI) for each roadway segment.

This report summarizes the findings of the evaluation of the Town's roads and railway crossings, (excluding bridges and culverts, which are the subject of another study), and identifies needed improvements for roads and railway crossings which are deficient or are expected to become deficient within the next 5-year period.

The total length of all roads under the jurisdiction of the Town is approximately 180 kilometres. The average kilometre weighted PCI rating of the Town's roads is currently 74. Based on the results of the evaluation, it appears that approximately 18.7% of the total road system would require some manner of rehabilitation/maintenance within a 5-year timeframe (PCI below 60) and an additional 16.7% would require monitoring/maintenance (PCI between 60 and 70).

As summarized in the following table, the total estimated costs (in 2024 dollars) to carry out the recommended 5-year program for maintenance of roads having a PCI less than 70 is \$6.5 million, while there have been no costs identified for railway crossing improvements. The road lengths and costs listed in the table below do not include works anticipated within the next five years such as special road projects as outlined within the Town's 5-year capital works plan. These costs do not include any road maintenance costs that have already been identified within the planned road maintenance projects upcoming within the next 5-year plan.

Years	PCI Rating	Road Length	Total Cost	Estimated Cost Per Year
1 – 2 RECONSTRUCTION/REHABILITATION	Less Than 50	0.277 km	\$257,098	\$128,549 (over 2 yrs.)
3 – 5 REHABILITATION	50 to 55	10.12 km	\$4,429,836	\$1,476,612 (over 3 yrs.)
1 – 5 MAINTENANCE	55 to 60	20.10km	\$1,159,529	\$231,905 (over 5 yrs.)
1 – 5 MONITOR/MAINTENANCE	60 to 70	27.12 km	\$685,440	\$137,088 (over 5 yrs.)

The proposed 5-year maintenance/rehabilitation program is based on undertaking the following:

- Reconstruction works for pavements with a PCI rating of 45 or less.
- Rehabilitation works such as resurfacing for pavements with PCI ratings from 45 to 55.
- Maintenance such as crack sealing for pavements with a PCI rating from 55 to 70.

This recommended level of maintenance is projected to result in a weighted average PCI rating of 72 in 5 years, which is a slight decline from the current weighted average PCI rating of 74. The resulting level of service still exceeds the Town's objective of maintaining an average PCI of 70, as identified in the Town of Tecumseh Asset Management Plan Version 4.0.

Bridge and culvert repair needs (which is the subject of another study), as well as other related infrastructure improvements should be considered in conjunction with the above noted road maintenance/rehabilitation strategy to ensure effective use of budgets.

1.0 Introduction

1.1 Purpose

The purpose of this Road Needs Study (RNS) was to update the 2019 study in accordance with the Town's Asset Management Plan. This update involves assessment of the existing road system and railway crossings in the Town of Tecumseh and preparation of a comprehensive plan for improving and maintaining the road system for the next 5-year period. The condition of the Town's bridges and culverts are the subject of another study.

In order to meet this objective, it was necessary to:

- a) Inventory all roads and railway crossings.
- b) Conduct traffic counts.
- c) Evaluate the pavement condition through the use of mobile sensing technology, based on which, road rehabilitation needs could be identified.
- d) Estimate the expected timing, scope and cost of required road improvements to address roadway deficiencies.
- e) Develop a 5-year road maintenance plan to meet the Town's desired level of service, as defined in their Asset Management Plan.

1.2 Background Reports

Reference was made to the Town's previous Road Needs Studies, including the most recent study that was completed in 2019, by Dillon Consulting.

In addition, the Town of Tecumseh Asset Management Plan Version 4.0 (2024) was considered to confirm the desired level of service and required maintenance/rehabilitation timelines for the Town's roadway network.

1.3 Study Methods

The study methods followed throughout this project are those recommended by the Ministry of Transportation Ontario (MTO), Transport Canada, and the American Society for Testing and Materials (ASTM). The roadway inventory and condition assessment were carried out using the following manuals:

- Standard Practice for Road and Parking Lot Pavement Condition Index Surveys (D6433-18), ASTM.
- Flexible Pavement Condition Rating – Guidelines for Municipalities (SP-022), MTO 1989.
- Inventory Manual for Municipal Roads, MTO 1991.
- Manual for Condition Rating of Flexible Pavements – Distress Manifestations (SP-024), MTO 2016.
- Grade Crossing Standards, Transport Canada 2019.

The Pavement Condition Index (PCI) was used as the rating method for the Town's road network. PCI is a generally accepted method for rating roadway conditions and has been used in past Road Needs Studies for the Town. The PCI rating process divides the road network into smaller segments (typically intersection to intersection) and combines the effects of both distress manifestations and ride quality to determine the overall score for each roadway segment. PCI ratings range from 0 (failed) to 100 (perfect) and are intended to help inform the repair/rehabilitation strategies of the road authority.

Road condition data was collected using vehicle-mounted 3D imaging, GPS, and video imaging to measure the existing pavement conditions for both distresses and ride quality. The use of fully automated data collection is intended to provide a more objective and repeatable rating of the Town's road network. Data review and validation was completed through the use of site visits and street photo imagery obtained as part of the data collection for this study.

1.3.1 Traffic Counts

The annual average daily traffic (AADT) on each road section was determined through a traffic counting program carried out in June of 2024. 123 24-hour automatic counts were taken and supplemented with forty-one (41), 4 hour and 8 hour automated turning movement counts at selected intersection locations. These 4 hour and 8 hour turning movement counts were adjusted to 24-hour volumes by using index factors derived from the 24-hour automatic counts. Location of the traffic counts can be found within Figures 1 – 3 in Appendix A.

Due to construction detours which were active during June 2024 when the data was collected, a selection of AADT values for specific affected road segments are not included. These segments are generally in the vicinity of the Scully Storm Pumping Station project and the County Road 42 Improvements Project. The AADT values for those road segments are not reflective of normal road network traffic operations and as such the 2019 values were carried forward. These segments are identified within the summary tables located in Appendix E.

1.3.2 Improvement Strategies and Cost Estimates

Roadway improvement strategies are based on recommendations found within the MTO and ASTM standards and guidelines and are consistent with previous Town of Tecumseh Road Needs Studies. Improvement costs estimates were determined based on 2024 benchmark construction costs established through evaluation of recent local construction projects along with input from Town staff.

The Town has outlined various planned special and road maintenance projects as part of their 5-year capital works plan. The effects and costs associated with these projects are discussed further in Section 3.9.

Further details on improvement strategies and construction costs are included in Section 3.7.

1.3.3

Data Collection and Processing

Data was collected and processed by StreetScan. Relevant data was uploaded to StreetScan's proprietary web-based portal, Streetlogix, including roadway information (segment lengths and ID, road width, pavement type, etc.), location photos, and PCI ratings. Information used to generate this report was exported from the Streetlogix portal into Microsoft Excel.

Various levels of quality control were used throughout the data collection and processing stages. StreetScan performs its own internal quality control and data verification by evaluating the still images taken of each street segment prior to populating the Streetlogix portal to ensure the proper rating was calculated. In addition to StreetScan's internal quality control measures, the data was field verified by manually rating various road segments per the MTO guidelines, adjustments were made to ratings accordingly.

All figures in this report were prepared using AutoCAD and the Town's base map in AutoCAD format. As new roads are assumed by the Town through development or improvements undertaken, the figures can be amended and kept up-to-date. The regular updating of the data and base map represents an integral component of a good Asset Management Plan.

All road section numbers for this RNS correspond with the Town's geographic information system (GIS) data to facilitate the entry of RNS data into the Town's database.

2.0

The Road System

2.1

Inventory and Classification

All roads and railway crossings in the Town were evaluated according to the methods outlined in the previously noted manuals and standards.

2.1.1

Road Inventory and Classification

Previous studies and the Town of Tecumseh Asset Management Plan Version 4.0 classify the Town's roads into the following categories:

- a) Urban: Roads having curb and gutter and storm sewer drainage
- b) Semi-Urban: Roads without curb and gutter in built-up urban areas
- c) Rural: Roads without curb and gutter outside built-up urban areas

Figure 2-1 summarizes the Town's road inventory based on the above noted classification. Road classifications were evaluated and updated as part of this report based on imagery provided through the data collection process and through observations from the Town. These updates are reflected figure below and in the summary tables found in Appendix E.

Figure 2-1: Town of Tecumseh Roadside Environment Mix

Data from all road segments was collected and logged via StreetScan's mobile imaging equipment. This evaluation excluded Provincial Highways, County-owned and private roads. The physical attributes of each road section, including drainage, roadside environment, traffic lanes, surface type, road widths, shoulder types and widths, and curb and gutter were generally available from the previous RNS completed for the Town and from the Town's GIS database. New roads assumed by the Town and roads closed/removed are discussed in **Section 2.1.2**.

Table 2-1 summarizes the road system by surface type.

Table 2-1: Road System Lengths by Surface Type

Surface Type	Length (km)	Percent of Road Network
Low Class Bituminous (tar and chip)	27.04	15.0%
High Class Bituminous (asphalt)	153.12	84.9%
Other (Concrete, Brick)	0.12	0.1%
Total Length (km)	180.28	100%

As part of this report, existing road surface types were updated based on a visual review of the imagery provided through the data collection process. The updated surface type information is reflected in Table 2-1 above and within the summary tables in Appendix E.

2.1.2

Road Network Updates

Since the previous RNS, the Town has assumed ownership of various roadways constructed as part of new developments. A list of added roadway segments since the 2019 RNS is outlined in Table 2-2 below. No segments were removed from the road network. In addition to these segments, some road segments have been modified (change in length or boundary). These changes have been reflected within the summary tables in Appendix E.

Table 2-2 2024 Road Network Updates

GIS Road ID	Road Name	From Street	To Street	Length (m)	Add/Remove
SS443	Outer Drive Connector	Hwy 3	Outer Drive	92	Add
SS454	Talia Trail	Habib Avenue	N Talbot Road	259	Add
SS456	Rafael Road	Habib Avenue	N Talbot Road	134	Add
SS457	Aiden Avenue	Habib Avenue	N Talbot Road	149	Add
SS459	Amar Avenue	Habib Avenue	Rafael Road	90	Add
SS446*	Habib Avenue	N Talbot Road	Talia Trail	339	Add

GIS Road ID	Road Name	From Street	To Street	Length (m)	Add/Remove
SS447*	Habib Avenue	Talia Trail	Rafael Road	89	Add
SS448*	Habib Avenue	Rafael Road	Aiden Avenue	90	Add
SS449*	Habib Avenue	Aiden Avenue	Maryam Crescent	180	Add
SS450*	Habib Avenue	Maryam Crescent	Amar Avenue	59	Add
SS451*	Habib Avenue	Amar Avenue	Jana Court	46	Add
SS452*	Habib Avenue	Jana Court	Maryam Crescent	86	Add
SS453*	Habib Avenue	Maryam Crescent	N Talbot Road	62	Add
SS462*	Maryam Crescent	Habib Avenue	Habib Avenue	503	Add
SS461*	Jana Court	Habib Avenue	Dead-End	81	Add
SS464*	Joachim Drive	8 th Concession Rd	Santarossa Street	427	Add
SS465*	Santarossa Street	Joachim Drive	County Road 46	208	Add
SS466*	Joachim Drive	Santarossa Street	Dead-End	292	Add

* Roads were added to the Town GIS road network after the data collection took place and were not included in the analysis.

Accounting for the road network changes mentioned above, the Town has seen a net increase of approximately 3.19 km since the 2019 RNS. 2.46km of this net increase was constructed after data was collected for this study in May 2024, and therefore was not included in this analysis.

Street names and segments are shown in Figures A-1 to A-3 of Appendix A.

2.1.3 Rail Crossings

All rail crossings located within the Town were inventoried and appraised in accordance with the requirements established by the Inventory Manual for Rail Level Crossings (MTO, 1988) and Transport Canada's Grade Crossing Standards (2019). Items included in the investigation were Railway Subdivision, Subdivision Mileage, spur name and spur mileage, train speed and number of trains per day, crossing condition, existing protection and illumination. Information was generally available from previous studies along with Transport Canada's Rail Network and Crossings online interactive mapping and Grade Crossing Inventory.

In 2016 Via Rail carried out rail crossing safety assessments according to Transport Canada's Grade Crossing Standards for the rail crossings at Lesperance Road and Tecumseh Road, crossing numbers 2002 and 2001 respectively. The findings of the assessments are discussed further in Section 4.0. In 2023, the segment of Lesperance Road and the at grade VIA Rail Crossing (crossing 2002) was improved to meet Transport Canada's Grade Crossing Standards. A subsequent safety assessment is not available for this crossing.

Rail crossings are numbered in the same fashion as road sections. The locations of the crossings are shown in Figures A-7 and A-8 of Appendix A.

2.2 Traffic Data

In order to verify each road section's design class, the existing and future planned use of that particular road section must be established. Road use is determined by measuring the traffic volume. The measure of traffic volume most commonly used is the AADT. A traffic counting program was undertaken to estimate the AADT of each segment. Additional detail regarding the traffic counting program can be found in Section 1.3.1.

The 2024 AADTs for each road segment are shown within the summary tables in *Appendix E*.

2.3 County of Essex Connecting Link Roads

Some roads under the Town's jurisdiction serve to connect the County of Essex road system. These roads are known as County Connecting Links. The County of Essex and the Town of Tecumseh have entered into a Connecting Link Agreement to share the costs of maintaining and reconstructing these roads, including any associated bridges and culverts. A copy of the agreement is included in Appendix B.

The following roads are County Connecting Links within the Town of Tecumseh:

- Brighton Road (County Road No. 21) in the former Village of St. Clair Beach.
- Parts of Manning Road (County Road No. 19) in the former Village of St. Clair Beach and Town of Tecumseh.
- Parts of Tecumseh Road (County Road No. 2) in the former Village of St. Clair Beach and Town of Tecumseh.

A plan showing the locations of these roads is included in the Connecting Link Agreement in Appendix B. The distribution of maintenance costs of these roads is as follows:

Table 2-3: County Connecting Link Proportional Share

County Road	Local Name	County's Share	Town's Share
CR 2	Tecumseh Road	61.4%	38.6%
CR 19	Manning Road	56.7%	43.3%
CR 21	Brighton Road	100.0%	0.0%

Maintenance includes patching, surface sealing, routing and sealing cracks, centerline pavement markings, snow removal and application of chemicals and abrasives.

The County's share of costs associated with road reconstruction is limited to excavation, granular base, pavement up to 7.0 metres wide and centerline pavement markings. All infrastructure outside of this

limit and other items like storm sewers, curb and gutter, streetlights, sidewalks, etc., are not shared, and are paid entirely by the Town.

For purposes of identifying the cost of within this RNS, the County's share was not deducted. This should be done at the time work is contemplated for these roads.

3.0

Road Improvement Program

3.1

General

Roadway maintenance needs and improvement strategies for the Town's road network have been based on meeting the desired level of service, as defined in the Town of Tecumseh Asset Management Plan Version 4.0, outlined below:

- Maintaining a PCI of 70 on average throughout the Town.
- Roads having a PCI of less than 50, considered a "Now" improvement, to be slated for some form of work within a 2-year timeframe.
- Roads having a PCI between 50 and 60, considered a "1-5 Year" improvement, to be addressed in some manner within a 5-year timeframe.

Roadway maintenance needs were evaluated as to type, cost and timing of improvements in accordance with the procedures listed in the MTO Inventory Manuals. The construction needs identified were determined based on past practices of the Town, past study recommendations, and practical improvement strategies.

3.2

Existing Conditions

The existing condition of the Town's road network is shown in Table 3-1. Approximately 35% (63.79 km) of the Town's roadways have a PCI of less than 70 with approximately 0.2% (0.28 km) requiring improvements within the next two years (PCI less than 50) as outlined in the above section. In addition, it should be noted that 26.6% (48.02km) of the Town's road network are rated between 50 and 65. A portion of these segments could degrade to below 45 over the next 5-10 years requiring significant reconstruction. Roads in this range should be regularly monitored and maintained.

Table 3-1: 2024 Tecumseh Road Network Condition Summary

PCI Range*	Condition	Length of Road (km)	Percentage of Total Road Network
90 to 100	Excellent	25.91	14.4%
75 to 90	Good	68.98	38.3%
65 to 75	Fairly Good	37.09	20.5%
50 to 65	Fair	48.02	26.6%
Below 50	Poor	0.28	0.2%
Total		180.28	100%

* Ranges and conditions selected from the Town of Tecumseh RNS 2019

Based on the 2024 road evaluation, the weighted average PCI for the Town's road network is 74.32, which exceeds the Town's target of 70. A kilometer weighted average is used throughout this report to more accurately reflect the PCI ratings.

Figure 3-1: PCI by Surface Type

Figure 3-1 outlines average PCI based on existing surface type. Overall, low class bitumen roadways (surface treated) have a slightly higher average PCI when compared to high class (asphalt) roadways. This can be attributed to the higher prevalence of HCB roads (~85%) along with the Town's LCB maintenance programs. Reconstructing one segment of LCB will have a greater impact on the average PCI than HCB.

Figure 3-2: PCI by Road Classification

In general, the average PCI's are marginally lower for Collector roads compared to Arterial and Local road classifications as shown in Figure 3-2. Average PCI's are consistent between all road classifications and roadside environment types as shown in Figures 3-2 and 3-3, with a maximum difference of 0.41 points. All road classes and environments also exceed the minimum PCI threshold of 70 as outlined above.

Figure 3-3: PCI by Roadside Environment

3.3 Time of Improvement

The recommended time of improvement is based on the Town's desired level of service defined in their Asset Management Plan, as shown in Table 3-2 below.

Table 3-2: Town of Tecumseh Time of Improvement

Pavement Condition Index*	Time of Improvement
Less than 50	Now
50 to 60	1 - 5 years
60 to 80	6 - 10 years
Greater than 80	Beyond 10 years

* Time of Improvement ranges have been referenced from the Town of Tecumseh Roads Condition Assessment Policy (Policy No. 82.1)

The Town of Tecumseh has built upon the recommendations found within the MTO's Flexible Pavement Condition Rating Guidelines for Municipalities (SP-022, 1989) shown below in Table 3-3. The Town has increased the threshold for both the "Now" and "1-5 Years" time of improvement categories. The modified time of improvement criteria allows for less expensive repair/rehabilitation (mill and pave, overlay) methods to be used which can extend the useful life of the roadway and delay the need for more costly reconstruction.

Table 3-3: MTO Time of Improvement

Pavement Condition Index (MTO)	Time of Improvement
0 to 20	Now – 3 years
20 to 40	3 – 5 years
40 to 60	Within 5 years
60 to 80	Normal Maintenance
80 to 100	No Maintenance

The above noted criteria should be used as guidelines and the actual time of improvements should consider other needs in the Town's overall budgeting program, for example, roads can be improved in conjunction with replacement of underground infrastructure.

Street segments times of improvement are shown within the tables of Appendix E and Figures A-4 to A-6 of Appendix A.

3.4 Improvement Types

Various roadway improvement types, applications, and costs were developed to address the unique needs of the Town of Tecumseh's road network. These improvement types were based on the recommendations found within the MTO Inventory Manual for Municipal Road (1991) combined with local knowledge and input from the Town. The improvement types, including application criteria and estimated costs can be found within Table 3-4 below, further details related to the description and scope of each improvement type is shown in Appendix D. The type of improvement recommended for each road segment can be found within the summary tables in Appendix E. It should be noted that since the previous 2019 Road Needs Study, significant material/construction cost increases have been observed. These increases are in the range of 20% to 75% and can have an impact on future road maintenance/improvements if not appropriately budgeted for.

Table 3-4: Road Improvement Types

Improvement Type	Roadside Environment	Road Classification	Abbreviation	Surface Type	PCI Range	Cost per m ²
Reconstruction	Rural	All	REC	HCB	Below 45	\$214.38
	Urban	All	RNS	HCB	Below 45	\$213.28
	Semi-Urban	All	S-RSS	HCB	Below 45	\$353.04
Basic Resurfacing (50mm)	Rural	Local	R-R1	HCB	45 to 55	\$32.38
	Urban & Semi-Urban	Local	U-R1	HCB	45 to 55	\$58.25
Major Resurfacing (100mm)	Urban & Semi-Urban	Collector/Arterial	RM	HCB	45 to 55	\$143.43
	Rural	Collector/Arterial	R-R2	HCB	45 to 55	\$68.19
Tar and Chip	Rural/Semi-Urban	Local	TC-1	LCB	Below 45	\$28.00
	Rural/Semi-Urban	Local	TC-2	LCB	45 to 60	\$13.00
Crack Sealing	All	All	CS-1	HCB	55 to 60	\$7.00
	All	All	CS-2	HCB	60 to 70	\$3.50

Type of improvement methods can be placed in the following categories:

- **Maintenance** – various maintenance treatments, generally applied when the pavements are in relatively good condition.
- **Maintenance and Rehabilitation** – More extensive maintenance or rehabilitation (overlays, base repairs) to protect the integrity of the road base when the pavements are in fair condition.
- **Reconstruction** – Full reconstruction of the road base and pavement surface, applied to those road sections that have generally deteriorated below a minimum PCI value of 45.

This study assumes that both reconstruction and maintenance/rehabilitation strategies will restore the road segment PCI to an excellent condition (PCI 100). Maintenance (crack sealing) is assumed to extend the service life of the road segment by two to five years according to *National Guide to Sustainable Municipal Infrastructure – Guidelines for Sealing and Filling Cracks in Asphalt Concrete Pavement* (2003). A 3-year service life increase was assumed for this strategy, which correlates to an estimated seven (7) point increase for PCI between 55 and 60, and a four (4) point increase for PCI between 60 and 70, based on the degradation profile. See Section 3.6 for further details on degradation estimates.

The improvement types for each road segment were chosen based on the above noted criteria along with the following assumptions:

- Existing surface treated (tar and chip) roads would remain surface treated.
- Semi-Urban roads have been assumed to be reconstructed as urban roads with storm sewers.
- Road segments identified for maintenance within the Town's five-year capital works plan would undergo the planned improvement (mill & pave/tar & chip).

It is recommended to combine the reconstruction of semi-urban to urban roads with the construction of underground infrastructure to reduce the impacts to the local areas and receive the economic benefits of the complimentary work. An alternate repair/rehabilitation strategy (major/minor resurfacing) may be appropriate where there are no current plans to extend underground infrastructure within the area.

For this RNS, a range of options were considered in determining the recommended maintenance/rehabilitation program considering the guidelines noted above, the Town's historical road maintenance budget and the ability of that maintenance program to meet the Town's desired level of service.

3.4.1 Preventative Maintenance

This RNS evaluates the existing conditions and proposes repair/maintenance strategies to maintain a level of service determined by the Town (average PCI of 70). The RNS is completed every five years as outlined within the Town's Asset Management Plan. As such, the improvement strategies outlined above are reactionary in nature and intend to rehabilitate or limit the severity and spread (maintain) of existing defects within the roadway. For this reason, preventative maintenance for roads in "good" and "excellent" (PCI above 70) condition is not explicitly outlined within the proposed maintenance strategies discussed within this report.

Preventative maintenance is a proactive strategy to maintain and extend the pavement life. Figure 3-4 below from the *National Guide to Sustainable Municipal Infrastructure- Timely Preventative Maintenance for Municipal Roads, April 2003 from the Nation Research Council* depicts the benefits that preventative maintenance strategies can provide in extending pavement life. Preventative maintenance treatments can consist of the following as outlined within the aforementioned report:

- Machine Patching
- Crack Sealing
- Slurry Sealing
- Micro-Surfacing
- Surface Treatment (chip seal, seal coat)
- Thin Hot Mix Overlay

Figure 3-4: Effects of Preventative Maintenance
(National Research Council, 2003)

In order for preventative maintenance to be effective, the correct maintenance type (outlined above) must be completed at the correct time. This involves regular inspections of the road network to identify and remediate any newly developed defects before they become more severe. Preventative maintenance measures must also be completed in a timely manner, as delays can increase the severity of the defect and reduce the effectiveness of the strategy. In order to carry out effective preventative maintenance strategies it is critical that dedicated road maintenance funds be allocated specifically for this purpose.

3.5 Benchmark Construction Costs

Benchmark construction costs were established for the various types and standards of improvements to roads and structures. The costs of the work were determined based on historical 2024 construction prices and the Town's operational costs for various road improvement types. Appendix C provides a comparison of benchmark unit prices used in the 2019 RNS and this 2024 study.

No railway crossing improvements have been identified and as such, no costs have been developed.

3.6 Pavement Degradation Forecasting

A critical component in determining appropriate pavement maintenance/rehabilitation strategies is forecasting pavement degradation over time. Many factors affect the degradation of roadways including weather, traffic volume, traffic type, maintenance strategies, existing road condition, etc. In this study, the Town's unique degradation curve has been updated based on the collection of historical data and the analysis of new road PCI ratings. From this data, an average annual PCI degradation was developed as shown in Figure 3-5.

This curve demonstrates that road segments with a lower PCI rating would have more severe distresses and would degrade at a more rapid pace than higher rated segments. As the degradation curve is based on actual road data collected through the RNS, the effects of the Town's current maintenance (crack sealing, etc.) strategies are incorporated.

Figure 3-5: Town of Tecumseh Pavement Degradation Curve

It should be noted that annual degradation was estimated for PCI's less than 40, as roads in this range would typically be repaired by the Town prior to more severe degradation. This data is also based on two RNS data sets and should be further refined as subsequent data becomes available.

3.7 Pavement Maintenance Strategies

Based on analysis of the pavement data outlined in the previous sections, pavement maintenance strategies were developed and considered. These strategies are outlined within Table 3-5 and range from rehabilitation and reconstruction of roads with a PCI less than 60 to no improvements to the road network. The values shown for each option in Table 3-5 do not include costs associated with special projects outlined within the Town's five-year Capital Works Plan; effects on PCI due to these projects has been included in the resulting weighted average PCI. The Town's Capital Works Plan and special projects is discussed further in Section 3.9.

Option 1 outlines a strategy which results in an estimated average PCI of 72.2 (2029) at an expenditure of \$6.53M by addressing (reconstruct/rehabilitate) all road segments which fall below a PCI of 55 and maintaining all road segments which fall between 55 and 70. A significant portion of the Town's road network currently sits between a PCI of 55 and 60 (22.16km) which results in a significant difference in the total program costs between Option 1 and Option 2.

Based on the results of the study, if the Town were to address (reconstruct/rehabilitate) all road segments which fall below a PCI of 60 (Option 2), an expenditure of \$16.9 million over the next 5 years or \$3.4 million annually would be necessary. With this strategy, the resulting estimated average PCI would be 74.5 (2029).

Table 3-5: Maintenance/Rehabilitation Program Options

Maintenance/Rehabilitation Strategies	Total Program Cost	Average Annual Cost	Resulting Weighted Average PCI (2029)
OPTION 1 (Recommended) 5 Year Program Rehabilitation for Roads in "Now" Category & Maintenance for Roads in "1-5" and "6-10" Category: • Reconstruction for PCI below 45 • Rehabilitation for PCI of 45-55 • Maintenance for PCI of 55-70 • Monitor PCI greater than 70	\$6.53 M	\$1.3 M/yr.	72.2
OPTION 2 5 Year Program Rehabilitation for Roads in the "Now" and "1-5" Categories • Reconstruction for PCI below 45 • Rehabilitation for PCI of 45-60 • Monitor PCI greater than 60	\$16.9 M	\$3.4 M/yr.	74.5
OPTION 3 5 Year Program • Do nothing	\$0	\$0/yr.	66.9

It should be noted that the “Do Nothing” option (Option 3) would result in a 2029 average weighted PCI of 66.9, which is lower than the required average of 70. Furthermore, this option would cause approximately 19.77 km (10.97%) of the road network to have a PCI of less than 45 by 2029. This strategy will also not achieve the overall network average required by the Town and would require additional and more costly reconstruction works at the conclusion compared to other strategies which employ more cost-effective rehabilitation measures to extend the life of the pavement.

The estimated annual effects of the proposed maintenance strategies can be observed in Figure 3-6 below.

Figure 3-6: Estimated Annual Effects of Maintenance Programs on PCI Values

3.8 Recommended Pavement Management Strategy

The information presented in Section 3.7 illustrates a range of maintenance program options that could be considered by the Town, including the associated costs and the resulting average weighted PCI for the road network. The Town's Asset Management Plan (2024) outlines annual road maintenance spending of approximately \$1 million annually for various activities ranging from crack sealing to milling and paving roads. The level of spending however appears to have exceeded this plan in the last 10 years, reflecting a maintenance value of more than \$1.3 million per year (2014 to 2024).

Based on annual cost and the resulting PCI, the recommended pavement management strategy is Option 1. The average annual costs for the recommended strategy exceed the current maintenance spending outlined within the Town's Asset Management Plan.

As noted above, significant material/construction cost increases have been observed since the 2019 RNS and as such, it is recommended that the current road maintenance budget be reviewed and updated to reflect the current construction cost realities. This increase ranges from 20% to 75% based on the type of improvement.

Estimated road improvement costs for each segment are included in Appendix E. The costs include engineering and contingency allowances per the MTO Manual for Municipal Roads (1991).

The recommended five-year pavement management program for the Town of Tecumseh is summarized in Table 3-6, and is based on the following approach:

- Address all road sections in the 'Now' category within a 2-year period.
- Reconstruction of all road sections with a PCI of 45 and below.
- Rehabilitation of all road sections in the "Now" and '1-5 Year' category with a PCI value ranging from 45 to 55.
- Incorporate maintenance measures on road sections in the '1-5 Year' and "6-10 Year" category with a PCI value ranging from 55 to 70.
- Monitor all road sections with a PCI value ranging from 70-100. Preventative measures can be carried out on an as-needed basis.

Table 3-6: Pavement Management Program - 2024-2029

Years	PCI Rating	Road Length	Total Cost	Estimated Cost Per Year
1 – 2 RECONSTRUCTION/REHABILITATION	Less Than 50	0.28 km	\$257,098	\$128,549 (over 2 yrs.)
3 – 5 REHABILITATION	50 to 55	10.12 km	\$4,429,836	\$1,476,612 (over 3 yrs.)
1 – 5 MAINTENANCE	55 to 60	20.10 km	\$1,159,529	\$231,905 (over 5 yrs.)
1 – 5 MONITOR/MAINTENANCE	60 to 70	27.11 km	\$685,440	\$137,088 (over 5 yrs.)
TOTAL		57.61 km	\$6,531,903	\$1,306,380 (over 5 yrs.)

If the recommended pavement management strategy (Option 1) was to be adopted, the expected average PCI value for the Town's road network would be 72.2 in 2029. This meets the desired level of service set out in the Town's Asset Management Plan. Figure 3-7 outlines the expected road network condition mix at the conclusion of recommended pavement management strategy.

The total cost per year of \$1.3 Million required to maintain the road network is slightly higher than the estimated annual cost for the preferred road maintenance strategy presented in 2019. It should be noted that unit prices and total road restoration costs have increased since 2019 due to the escalation of construction prices and the effects global inflation.

Figure 3-7: Estimated 2029 Tecumseh Road Network Condition Rating

3.9 Planned Capital Spending

The Town of Tecumseh 5-year Capital Works Plan outlines projects that are intended to be undertaken within the next five years and include works such as storm and sanitary sewer installation that may involve road repair/reconstruction along with planned road maintenance projects. A summary of the proposed special projects can be found within Table 3-7.

Costs associated with the special projects listed in Table 3-7 have not been included in the recommended pavement management program costing. Should any of the listed special and maintenance projects, which fall within the recommended pavement management strategy not be implemented, costs associated with the works should be added to the total strategy cost.

Table 3-7: Town's Recommended Special and Maintenance Projects for 2024 to 2029

Reconstructed Road	GIS Segment(S)	Limits of Project	Planned Year of Project
Little River	T103, T100, T098	Manning Road to Dillon Drive	2024
St. Gregory's Road	T232, T225	Green Valley Drive to Michael Drive	2024
Lesperance Road	SS044, SS042	Westlake Drive to Calvary Court	2024
St. Anne Street	SS031, SS029	Gouin Street to Intersection Road	2024
Manning Road	T_SC001, T_SC002, T_SC003, T_SC004	Riverside Drive to St. Gregory's Road	2027
Sexton Side Road	SS336, SS308, SS309	County Road 46 to STR	2024
Lesperance Road	SS048	Westlake to County Road 22	2025
Riverside Drive	SC004, SC005, SC006	Grant Avenue to Arlington Boulevard	2025
Riverside Drive	SC007	Arlington Blvd to Kensington Blvd	2026/2027
Sylvestre Drive	SS095, SS098	Sylvestre Drive to County Road 19	2027
Ure Street	SS251	North Talbot Road to Delduca Drive	2028
O'Neil Street	SS248, SS247	North Talbot Road to Delduca Drive	2028
Clovelly Road	SC062, SC064, SC060, SC136	Full Extent	2025
Burlington Road	SC057, SC059	Full Extent	2025
Warwick Road	SC058	Full Extent	2025
Essex Road	SC061	Full Extent	2025
Kensington Boulevard	SC054, SC055, SC137	Full Extent	2025
Rutland Road	SC063	Full Extent	2025
Edgewater Boulevard	SC035, SC036, SC039	Full Extent	2025

It should be noted that 41 road segments are to be improved as part of the Town's planned Special & Maintenance Projects which aligns with the number of segments planned in the 2019 study. Maintenance projects planned for after 2025 are not included in this study. It is understood that future maintenance projects will use this report as a guideline.

4.0 Rail Crossing Improvements

4.1 Recommended Improvements

Table 4-1 summarizes the rail crossing recommendations of the 2016-2017 rail assessments carried out by Via Rail (Hatch) for crossings 2001, no improvements have been noted for rail crossing 3006 (Canada Pacific Rail). Crossing 2002, the VIA Rail Crossing at Lesperance Road, was fully reconstructed between Lachance Street to Tecumseh Road in 2023. As part of this reconstruction, all recommended improvements identified were addressed and are no longer outstanding. The original assessments can be found in Appendix F. Details of the Town's rail crossings can be found in Table F-1 of Appendix F.

Table 4-1: Recommended Rail Crossing Improvements (2016-2017)

Crossing Number	Crossing Location	Recommended Improvement
2001	Tecumseh Road	- Road dashed markings should be installed in accordance with the "Do Not Stop On Tracks" sign. - Consider the possibility of installing a traffic signal upstream of crossing for northbound traffic (to help prevent queuing onto the tracks). - Repaint faded "X" pavement markings. - Stop bar must be painted and square with the road.

Information from 2016-2017 Rail Crossing Safety Assessments conducted by Via Rail

The above noted recommendations were based on the Transport Canada Grade Crossing Standards and Guidelines. Based on a site review it appears that the stop bars have been corrected (square to the roadway) and the faded "X" pavement markings have been corrected. No costs have been allocated for this work in this study.

5.0

Asset Management Plan

5.1

General

To expand on current information the Town has on the road network, Dillon has compiled roadway evaluation information from past studies and compared it with capital spending over the same periods. The purpose of this was to determine if past spending and roadway management has been effective in maintaining the level of service standard which is outlined in the Town's Asset Management Plan. Dillon was able to collect information from studies conducted in 2003, 2008, 2014 and 2019. Capital spending information for maintenance and other capital projects (road component only) was provided by the Town of Tecumseh for those time periods.

Figure 5-1: Effects of Road Expenditure on PCI

The graph above displays the relationship between the Town's capital investments on roadways and the average Pavement Condition Index (PCI) for the Town's entire road network. The information has been separated into these ranges which represent the periods where an average PCI value was determined for the road network. The Town's annual maintenance spending in the last 8 years is \$13.0 million which equates to an annual spending value of \$1.63 million per year. Should this level of spending be maintained, it would be sufficient to carry out the proposed pavement management program.

6.0 Study Updates

6.1 Monitoring and Updating

The key information found within this RNS with respect to inventory, segment ratings, and construction needs is based on the existing conditions at the time of the road survey. As such, these conditions are subject to perpetual change and need to be regularly monitored to ensure reliability. Between this and subsequent RNS's the following should be undertaken:

- Monitor the road network to identify and correct any new deficiencies that were not apparent at the time of this study (preventative maintenance).
- Monitor and identify any significant changes to Construction Benchmark unit prices and update the estimated repair/rehabilitation costs accordingly. Impacts to the Town's budget will have to be evaluated.

6.1.1 Future Development

This RNS identified roads that are currently deficient or will become deficient within the next 5 years. Identification of future road needs is based on forecasting degradation of the pavement. New large-scale development will increase traffic volumes on existing surrounding roads which may alter the priority of the needs by accelerating pavement degradation. In particular, the Manning Road Secondary Plan Area and the Tecumseh Hamlet Secondary Plan Area will have impact on the Town's road system. As this and other developments proceed, the surrounding road system should be re-evaluated.

6.2 Future RNS Updates

As outlined within the Town's Asset Management Plan, the RNS is to be updated within a 3-to-5-year timeframe. It is recommended that future RNS's include the following:

- Further refinement of the Town specific pavement degradation curve with future PCI data.
- Town-wide traffic counting program to update the 2024 data.
- Review and update construction benchmark costs.
- Update the road inventory to include new road segments.
- Review and update repair/rehabilitation strategy costs.
- Review and update repair/rehabilitation strategies to ensure alignment with current best practices.

The RNS content can remain relevant for at least 5 years with implementation of the aforementioned update procedures.

We trust the information and recommendations provided within this report will be of benefit to the Town and appreciate the opportunity to collaborate with the Town in developing this Road Needs Study.

Sincerely,

DILLON CONSULTING LIMITED

Dean Rice, M.A.Sc., P.Eng.
Project Manager

Kailee Dickson, P.Eng.
Project Engineer

Vic, enclosed is the Connecting Link Agreement for maintenance for the Town of Tecumseh as of 2007. Town of Tecumseh has yet to sign.

Richard Fazecash/gh

.....

SCHEDULE 'A'

THIS AGREEMENT made in triplicate this __day of __, 2007

BETWEEN:

THE CORPORATION OF THE TOWN OF TECUMSEH

Hereinafter called the 'Urban Municipality'

OF THE FIRST PART

And

THE CORPORATION OF THE COUNTY OF ESSEX

Hereinafter called the 'County'

OF THE SECOND PART

WHEREAS, certain roads in the Urban Municipality are not parts of the County Road System but are extensions of, or connections to, roads included in the County Road System;

AND WHEREAS the County may enter into an Agreement in writing with the Urban Municipality for the maintenance of such road, and, if it is in the public interest that such road be constructed, for the construction thereof;

AND WHEREAS within the Urban Municipality the following streets are not part of the County Road System but are extensions of, or connect roads included in the County Road System namely:

County Road	Local Name	Location	Distance (m)	Area (m ²)
CR 2	Tecumseh Rd.	Windsor City Limits - Former East Limit of St Clair Beach (Pike Creek CL)	4,325.9	53,629.5
CR 19	Manning Rd.	Riverside Dr. - Former South Limit of Tecumseh & St Clair Beach (Via Railway ROW)	1,681.8	19,973.1
CR 21	Brighton Rd.	Former South Limit of St Clair Beach (Via Railway ROW) - CR 2 (Tecumseh Rd.) EP	332.0	2,079.9

Note: Refer to Attached Figures

THEREFORE this Agreement witnesses that in consideration of the premises and the covenants hereinafter contained parties hereto hereby covenant and agree the one with the other as follows:

1. The Urban Municipality will maintain and keep in a proper state of repair all necessary curbs, gutters, catch basins, combined sewers, storm sewers or drains, sidewalks, traffic signal systems, street lighting and road signing or any other special work, all of which shall be borne by the Urban Municipality. In addition, the Urban Municipality agrees to maintain shoulders and trim trees and bushes as required bearing all associated costs.
2. The County will maintain the pavement and roadway on the said road by performing or arranging for the performance of the following work whenever necessary or required namely:

- Spray patching, cold and hot mix patching
- Surface sealing
- Routing and sealing of cracks
- Centerline pavement marking
- Snow removal and application of chemicals and abrasives

3. The widths and areas of the pavement or roadway on the said road having been determined and mutually agreed upon, the expenditures made by the parties in fulfillment of their obligations under Paragraph 2 will be borne and paid by each of the them as follows:

County Road	Local Name	County's Share	Town's Share
CR 2	Tecumseh Rd.	61.4%	38.6%
CR 19	Manning Rd.	56.7%	43.3%
CR 21	Brighton Rd.	100.0%	0.0%

4. The Urban Municipality will maintain every culvert or bridge on, over or across the roadway on the said road passes and which is under the jurisdiction of the Council thereof and will keep the same in proper state of repair at all times.
5. The expenditures made by the Urban Municipality in fulfillment of its obligations under Paragraph 4, exclusive of any part thereof which is incurred to provide for sidewalks or for the track allowance of a street railway, will be borne and paid 50.0% by each the County and the Urban Municipality.

6. The Urban Municipality will pay or be responsible for the part of the cost of maintaining every such culvert or bridge, which is incurred to provide for sidewalks or for the track allowance of a street railway.
7. The party doing work under this Agreement and claiming contribution from the other party will submit to the Treasurer of the other party a statement of the total expenditure and the proportion thereof claimed on or before the 15th day of each month in respect of the expenditure of the preceding calendar month, and payment of the amount owing in respect of such claim shall be made to the Treasurer of the claiming part on or before the last day of the month in which the claim was made.
8. The party doing work under this Agreement will furnish the engineer for the other party with all plans, specifications, contracts, measurements and information relating to the work at all reasonable times for the purpose of inspecting the same and permit him or his agent to examine all books, accounts, records and correspondence in relation thereto.
9. Where in carrying out any work under Paragraph 1 or installing any utility or service on the said road it is necessary to cut through or damage the pavement or roadway thereon, the Urban Municipality will make good the damage and restore the pavement or roadway to its original condition at its own cost and expense.
10. Where the Urban Municipality permits any person, company or corporation to cut into or damage the pavement or roadway on the said road for the purpose of installing any utility or service or for any other purpose it will see that such person, company or corporation makes good the damage and

restores the pavement or roadway to its original condition at the sole cost and expense of such person, company or corporation.

IN WITNESS WHEREOF the parties have affixed their corporate seals attested by the hands of their respective officers duly authorized on their behalf.

Signed, Sealed and Delivered

List of Abbreviations

TABLE D-1
LIST OF ABBREVIATIONS

Abbreviation	Description
A	Arterial Road
C	Collector Road
CS-1	Crack Sealing Level 1: 4m of crack seal for every metre of road
CS-2	Crack Sealing Level 2: 2m of crack seal for every metre of road
HCB	High-Class Bitumen (Asphalt)
L	Local Road
LCB	Low-Class Bitumen (Tar and Chip)
R	Rural Road
REC	Reconstruction of Roadway including the following: • Excavate and dispose of existing road and base • Ditching • 400 mm Granular “A” Base • 100 mm hot-mix asphalt
RM	Major Resurfacing including the following: • Base repairs for 50% of the roadway • Milling for 50% of the roadway • Curb removal and replacement on both sides for 50% of road length • Adjust manholes and catchbasins to new surface grade • 100 mm hot-mix asphalt
RNS	Reconstruction with nominal storm sewers including the following: • Excavate and dispose of existing road and base • Curb and gutter removal • Granular “A” base (400mm) • New curb and gutter • New sub-drain • Adjust manholes and catchbasins • 100 mm hot-mix asphalt
R-R1	Basic Resurfacing including the following: • Hot-mix padding for 20% of the roadway • 50 mm hot-mix asphalt • Granular “A” to raise shoulders to new surface grade

Abbreviation	Description
R-R2	Basic Resurfacing including the following: • Hot-mix padding for 20% of the roadway • 100 mm hot-mix asphalt • Granular “A” to raise shoulders to new surface grade
S	Semi-Urban Road
S-RSS	Reconstruction including installation of storm sewers including the following: • Excavate and dispose of existing road and base • Curb and gutter removal • Granular “A” base (400mm) • New curb and gutter • New sub-drain • New storm sewer (525mm diameter) • New manholes and catchbasins including leads • 100mm hot-mix asphalt
TC-1	Tar and Chip including the following: • Excavate and dispose of existing road surface • 100mm granular ‘A’ road base • Double lift of liquefied emulsion and aggregate (2-16mm lifts)
TC-2	Tar and Chip Including the following: • Double lift of liquefied emulsion and aggregate (2-16mm lifts)
U	Urban Road
U-R1	Basic Resurfacing including the following: • Minor base repairs for 10% of the roadway • Hot-mix padding for 20% of the roadway • Curb removal and replacement on both sides for 50% of the road length • Milling 1.0m of existing pavement along both curbs • Adjust manholes and catchbasins to new surface grade • 50 mm Hot-mix asphalt
U-RSS	Reconstruction including installation of storm sewers including the following: • Excavate and dispose of existing road and base • Curb and gutter removal • Storm sewer removal • Manhole and catchbasin removal including leads • Granular “A” base (400mm) • New curb and gutter • New sub-drain • New storm sewer (525mm diameter) • New manholes and catchbasins including leads • 100 mm hot-mix asphalt
